

TESCORP PLANT AIR AIR COMPRESSION UNITS

Systems From Utility Air to Large Flow Pneumatic Handling Applications

Price Available Upon Request.

The TESCORP "Plant Air Series" offers a full line solution to your facilities needs. All Tescorp units are offered in simplex, duplex or multiple compressor arrangements for continuous, redundant or energy efficient operations. Plant Air Units are constructed as either open skid or totally enclosed for harsh weather applications.

The unit offers the following design and optional features:

- » Unit air pressure up to 200 psi and continuous volumes from 8CFM to 608CFM
- » Continuous duty industrial reciprocating, rotary vane or rotary screw compressors
- » Fully automated control system with optional interface with customer's plant DCS
- » ASME VIII coded Wet and Dry receivers
- » Rugged oilfield skid with environmental containment
- » 120/240 Single Phase and 240/480 Three Phase available

fully protected factory enclosure for full weather protection.

- » Flow rates of 54 to 608 CFM
- » Horsepower's from 15 to 350 BHP

Duplex Air Units:

All units can be shipped as a duplex unit with a backup compressor available for 50% to 100% volume standby. Wet and Dry receives and Dryers can be duplexed as well.

Weatherproof Enclosed Air Units:

TESCORP units are available with full-weather enclosures, fully transportable and personnel accessible structures. Designed for harsh and cold environments, the unit is climate controlled and insulated with expandable foam insulation encompassed in a full metal structure. Simple field installation includes one run of 480 VAC power and connection to your instrument air piping for turn-key operations.

Rotary Vane Air Units:

TESCORP designs and constructs large volume air units for pneumatic conveying and large flow applications.

- » Flow rates of 50 to 3500 cfm
- » Horsepowers from 30 to 500 BHP

Options:

- » Network capable with multiple compressors
- » Oil free compression
- » Zero loss drain valves

Quincy Reciprocating Compressor Units:

Small horsepower instrument air package designed for small volumes. The compact unit is mounted on a wet receiver with a control panel mounted for easy access

- » Flow rates of 8 to 125 CFM
- » Horsepower's from 3 to 30 BHP

Mattei Oil Injected Rotary Vane Units:

Medium horsepower rotary vane compressor package designed for high efficiencies and operational service. The unit is constructed with a fully protected factory NEMA 4 harsh weather enclosure.

- » Flow rates of 15 to 350 CFM
- » Horsepower's from 5 to 60 BHP

Atlas Copco Oil Flooded Rotary Screw Units:

Medium to large horsepower rotary screw compressor package designed for constant operational service. The unit is constructed with a
