

BREATHING AIR

BAUER COMPRESSOR PRODUCTS

*****Pricing available upon request**

BAUER's Breathing Air Compressor Systems are the gold standard for firefighting, diving, military, offshore, industrial and medical applications where reliable ultra-pure breathing air is required to maintain life safety. Each product within the breathing air portfolio is specifically designed for the end user application ranging from small mobile systems to very large stationary systems operating in fire stations, mobile vehicles, dive operations, shipboard, offshore platforms, industrial plants, etc. Bauer systems can fit any need from 2.9 scfm charge rate up to 145 scfm charge rate (per compressor system) with fill pressures up to 6000 psig. Bauer Containment SCBA/SCUBA fill stations are built to exceed the current NFPA standards and including independent certification by a third party laboratory.

We offer the following Breathing Air Bauer Products:

Firefighting:

» Reliable breathing air compressors systems have been Bauer's focus for six decades. Whether you require a stand-alone compressor, a fully integrated SCBA recharging system, or a complete SCBA trailer system, our priority is to provide breathing air of the highest quality.

Scuba Diving:

» Pure breathing air is essential. Their leading design technology, coupled with stringent quality control, produces unsurpassed portable and stationary breathing air compressor systems that have been tested for safety and reliability.

Military Breathing Air Products:

» BAUER has been known as your "Go-To" source for reliable high pressure breathing air compressor systems and components for many decades. Whether your application is on or at a military facility, a Schedule 84 Municipal Customer, or a shipboard application look to us and BAUER to solve your needs. We manufacture lightweight portable units to integrate "All-In-One" packages to trailer mounted systems, all equipped with BAUER's performance proven air-cooled compressor and purification technology.

Legacy Program:

» The LEGACY program units are built on the popular and serviceable VERTECON platform and are not stripped down units. Rather they are built with BAUER's most popular options and upgrades! The LEGACY Fill Stations are built on the Fully NFPA 1901 Compliant CFSII Platform.

» LEGACY units will be built in quantity utilizing proven "work cell" manufacturing techniques for "off the shelf", in-stock delivery. This quantity build coupled with the uniform LEGACY platform enables us to capture economies of scale which in turn allows us to leverage internal resources and supply chain management. This translates into a price structure that offers substantial savings above and beyond our normal discount for our valued distributors.

Oil & Gas Breathing Air:

» Bauer has been the performance proven leader in the high pressure breathing air industry for many years.
